

## **The Paskwa Fire (HWF030) | May 24, 2023, at 10 a.m.**

The Paskwa fire is located in the community of Fox Lake and was detected on May 2, 2023. This fire is classified as Out of Control (OC) and the last recorded size is 73, 936 hectares. The fire is inside the Wood Buffalo National Park boundary and is approximately 8km from the community of Garden River.

Yesterday the fire area received approximately 3mm of rain. This, combined with lower temperatures and higher relative relative humidity will result in low levels of fire behaviour. The fire is not anticipated to experience significant growth today or tomorrow.

Today, crews will continue work to secure the northeast perimeter of the fire working along the retardant line on the flank closest to the community of Garden River. Crews have been working to extinguish 30–60-feet along the perimeter from the oxbow to the Peace River. Bucketing work will continue on the east side of the oxbow where the fire has been moving into slash and old burn areas.

Many hotspots have dug deep into the ground in the community of Fox Lake and significant work remains to fully extinguish the fire in this area. Crews are working to create an extinguished perimeter of approximately 30 metres around every structure in the community of Fox Lake. This objective will take time given the number of structures in the community. ATCO crews have been working in Fox Lake to restore power and repair damaged lines.

There are 83 firefighters, 9 helicopters, and heavy equipment working on the Paskwa fire. Air tanker support is available as requested. Yesterday, three 8-person firetack crews arrived onsite.

Little Red River Cree Nation has an evacuation order in place for the community of Fox Lake. The community of Garden River remains on an evacuation alert. For information regarding the evacuation, please stay informed by visiting the Little Red River Cree Nation's Facebook page.

## **Weather Forecast | Paskwa Fire (HWF030)**

The Incident Management Team has a dedicated Fire Behaviour Analyst and therefore the weather briefing will be fire area specific. Cool and humid weather has moved into the area. Today, the forecast is as follows, a temperature of 17 degrees and relative humidity of 55 percent, with west winds of 15km/h and a 70 percent chance of light to moderate precipitation of less than 5mm.
